THE ICE CREAM DREAM

ABOUT US

The ice cream dream on planet Earth!

For nearly 30 years, **Minimelts® ice cream** has been using natural quality ingredient to produce the **coldest and coolest ice cream** in the world with its patented cryogenic freezing technology!

Our premium, **cryogenically frozen**, beaded ice cream products are unlike conventional ice cream. We use a special mixing and freezing process to produce our unique taste and texture. This involves instant freezing of the ice cream in liquid nitrogen **at -197°C and storing it at -30 to -40°C!** locking in 100% of the natural flavors without air or water.

We offer **two types** of Minimelts ice cream balls; regular and big Minimelts. Our ice cream flavors are just simply better – **we are creamier, richer and tastier!**

Minimelts Flavors
